Green jobs needed in the transition

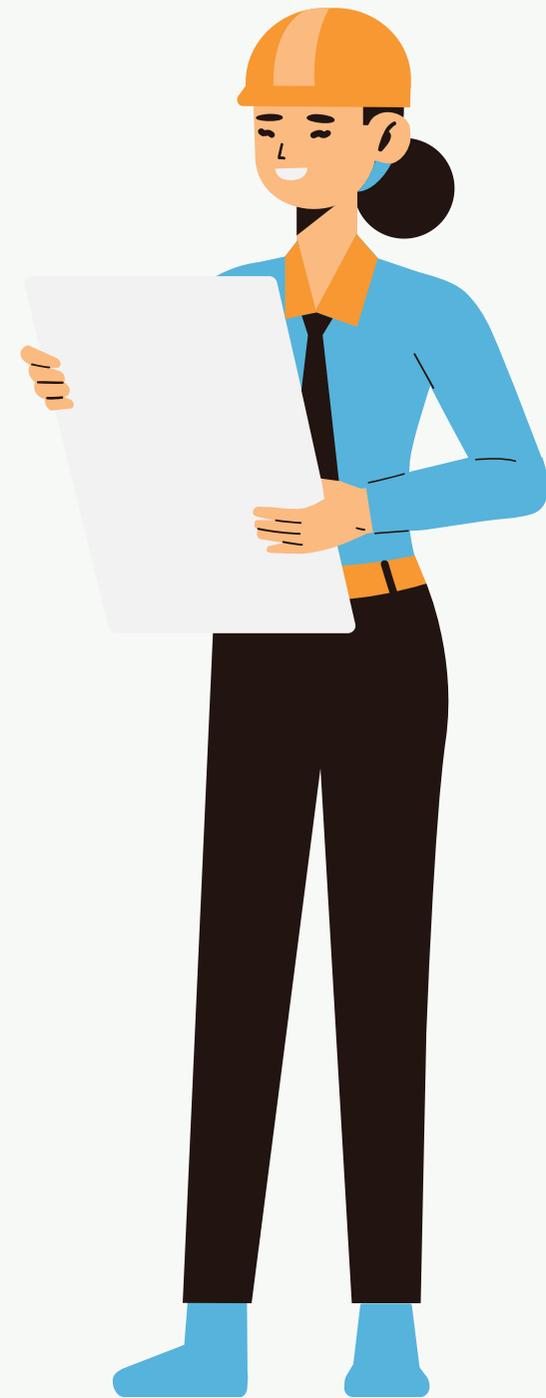

The transition to a decarbonised economy is not only essential to halt the climate change but it is also a driver to economic growth with the potential to create millions of new jobs. The United Nations Environment Programme (UNEP) defined green jobs as “positions in agriculture, manufacturing, R&D, administrative and service activities aimed at substantially preserving or restoring environmental quality.”

To put it in another way, environmental jobs are those aimed at protecting and promoting the environment, or those, which consider their impact on the health of the planet at all times and endeavour to minimise it. Considering that green jobs are not only new types of jobs, but also traditional jobs that have been modified in a green perspective. According to experts, the sector with the most potential to create green jobs are:

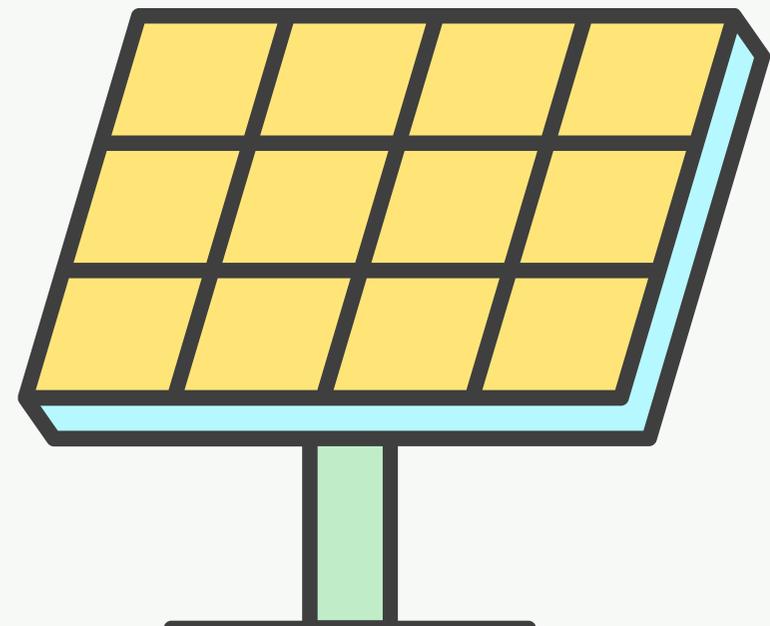

Energy

According to IRENA, the renewable energy sector employed 11.5 million people, directly and indirectly, in 2019. Renewable energy employment has continued to grow worldwide since 2012. The solar photovoltaic (PV), bioenergy, hydropower and wind power industries have been the biggest employers.

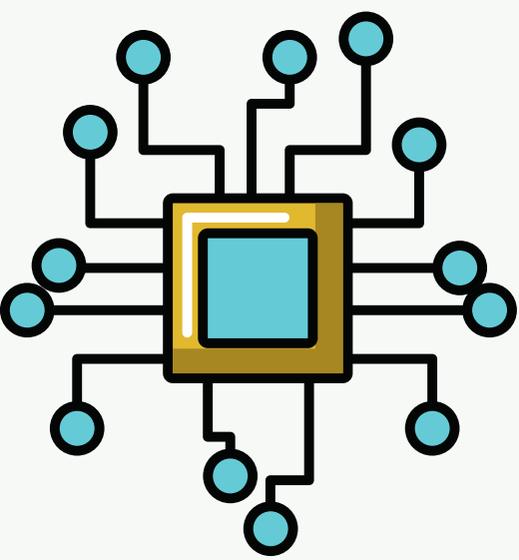

Agriculture

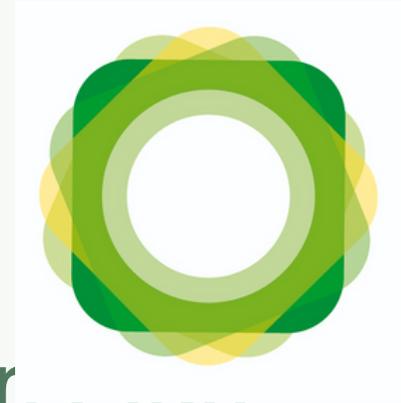

According to FiBL, the organic agriculture market is still growing around the world, in many cases in double-digit figures. For instance in Europe organic food sales increased by 10.5% in 2017 reaching 37.300 million euros.

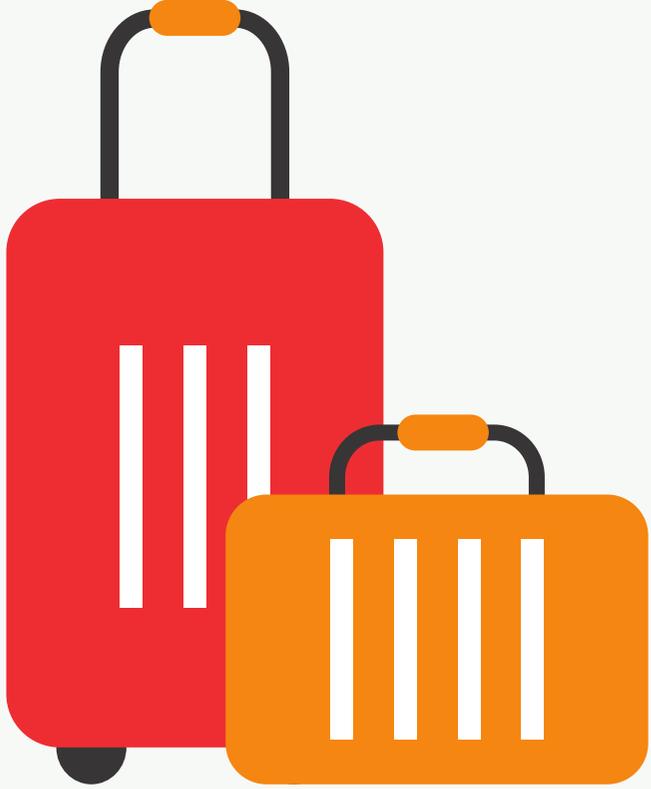

Design

The Circular Economy Action Plan requires increasingly high recycling rates and it has established ever-stricter eco-design criteria. Moreover, the awareness among consumers is increasing. Consequently, eco-design has become a booming source of jobs.

Tourism

With a society that is increasingly concerned with the health of the planet, ecological tourism is a rising trend.

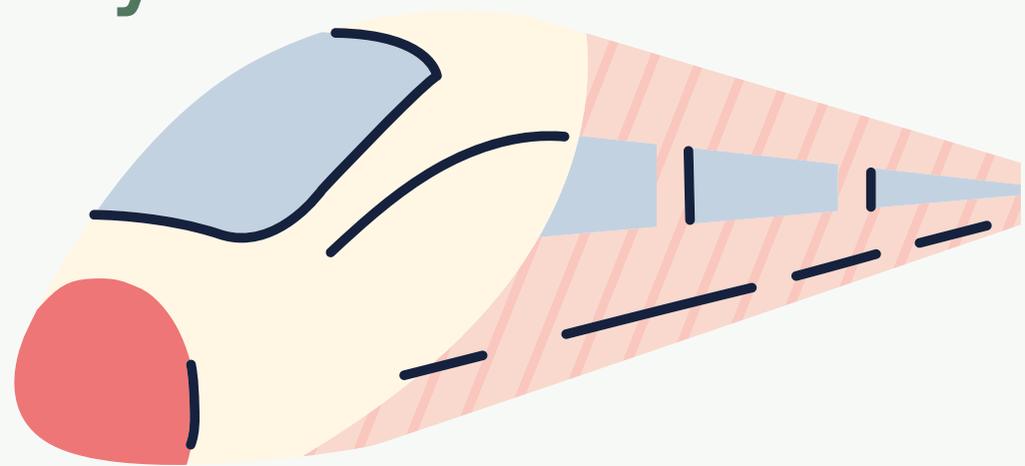

Transport;

A sector responsible for more than 30% of the CO2 emission in European Union. Many countries have already implemented measures to drastically reduce transport emissions creating job opportunities in the electric vehicle sector, public transport and electrified railway.
